ANNEX B. DEFINITION OF TERMS

Alert Threshold  Refers to the level of occurrence of disease that serves as an early warning for epidemics. An increase in the number of cases above the threshold level should trigger an investigation, epidemics preparedness and implement appropriate prevention and control measures.

Cluster of cases  3 or more cases with temporal (occurring of 4 weeks) and geographical association (within the same barangay).

Epidemic Threshold  Refers to the level of occurrence of disease above which urgent response is required. The threshold specific to each disease and depends on infectiousness, other determinants of transmission and local endemicity level.

Epidemiology  Refers to the study of the distribution and determinants of health-related states or events in specified population, and the application of this study to the control of health problems.
